MS in Management of Drug Development!

The MS program in the Management of Drug Development (MDD) is a novel degree program designed for students with a background in preclinical biological and pharmaceutical science.

This program will allow you to design, critically evaluate, and optimize broad drug development strategies from the earliest stages of drug design and discovery to their application in patients and marketing.

Depending on your interest, additional courses could focus on strategic, policy and regulatory aspects of drug development.

The MDD degree requires the completion of 32 units, including a 3-unit directed research project. The degree can be completed on a full-time or part-time basis and courses can be taken onsite or online.
